

PROSOCO's

Health, Safety and Environmental Policy

Environmental, Health, and Safety concerns are a management responsibility of equal importance to Service and Quality. Successfully managing Environmental, Health, and Safety issues is an essential element within our overall business strategy.

PROSOCO is committed to an effective Environmental, Health, and Safety Management System that is applicable to all employees and centers on the belief that all accidents are preventable. PROSOCO assigns the highest priority to safety and environmental issues when making business decisions and believes that no business objective is so important that it will be pursued at the sacrifice of safety. We further believe that a well informed and well trained employee is an asset to themselves and others, which assures that PROSOCO will continue to be a leader in its field.

PROSOCO recognizes that its long term business success is predicated on the following:

- Being an industry leader in the "Built Environment" by providing a safe and healthy workplace for all employees.
- Articulate management's commitment to Environmental, Health, and Safety (EHS) while recognizing line management's responsibilities and the active participation by all employees.
- Promote an atmosphere where EHS issues are considered and managed with the same emphasis as other business decisions.
- Provide the resources to maintain educational and training standards that enhance employee capabilities and promote free and open discussions on all EHS issues.
- Establish an environment that promotes operational excellence through continuous improvement.

PROSOCO will evaluate its EHS performance through regularly scheduled appraisals in order to ensure that our policies and objectives are being accomplished and to reinforce the Company's continuing commitment to providing a safe and healthy workplace for all employees.

PROSOCO is a proud member and supporter of NPCA's Coatings Care and CSPA's Product Care product stewardship initiatives.
